ProSoft Technology releases Modbus Serial Modules for CompactLogix L1x and 1734 Point I/O Adapters

The ILX34-MBS232 and ILX34-MBS485 modules are perfect for applications that need RS-232, RS-422 or RS-485 Modbus Serial connectivity, including SCADA and field device interface projects.

Bakersfield, Calif., April 7, 2014 – ProSoft Technology®, a leading industrial communication company, is pleased to announce the release of the Modbus Serial Modules for CompactLogix L1x and 1734 Point I/O Adapters.

These products are the first in-chassis modules designed to connect Modbus Serial with Rockwell Automation's CompactLogix L1x processors, and they also work with 1734 Point I/O adapters. The modules, which can be configured as a Modbus Master or Slave, come with an Add-On Instruction that is used to configure the modules and creates UDTs that have logical definitions for I/O, status, and control information. These controller tags contain diagnostic data, enabling decisions to be made based on the nodes' health. They support up to 30 Modbus commands and up to 36 words per command, which should be sufficient for most applications.

Find out more about the modules at psft.com/ilx34232pr and psft.com/ilx34485pr.

ProSoft Technology: Where Automation Connects

ProSoft Technology specializes in the development of industrial communication solutions for automation and control applications. For more than 25 years, ProSoft Technology's product lines have grown to over 400 communication interface modules supporting more than 60 different protocols. These include in-chassis interfaces compatible with the large automation suppliers' controllers such as Rockwell Automation and Schneider Electric, as well as protocol gateways and industrial wireless solutions. With 500 distributors in 52 countries and Regional Area Offices in Asia Pacific, Europe, Middle-East, Latin America and North America, we at ProSoft Technology are able to provide quality products with unparalleled support to customers worldwide.
