

AFCON SOFTWARE AND ELECTRONICS LTD.

## P-CIM SCADA/HMI 7.70

**Afcon Software and Electronics Ltd.**, a leading provider of SCADA systems and solutions announce (August 2007) the release of new revision of **P-CIM SCADA**, version 7.70.

This revision includes a new reporting system, the **P-CIM Supreme Report**, an innovative, revolutionary Process Control System analysis and reporting software aimed at improving decision making process at all levels of the enterprise.

Unlike most other reporting tools, the P-CIM Supreme Report combines open connectivity to multiple sources such as real time and alarms data, historical data, relational databases and files data with excellent performance, delivering easy-to-use and secure reports.

P-CIM Supreme Report offers a user-friendly interface, making it very easy to design report templates with company logos and built-in graphical objects.

P-CIM Supreme Report integrates a library of both predefined statistical and analytical objects allowing users to access information such as Minimum, Maximum, Average, Weighted Average, Sum, Integral, Counts, Duration and Percentage and display it in Text Fields, Pies, Bars, Charts and Tables.

Reports can be generated automatically or manually and distributed to web portal, e-mails, file servers and printers in secured PDF format.

P-CIM 7.70 also features the Self Customized Trend, allowing instant trend generation on the fly using graphic objects. P-CIM 7.70 offers enhanced data and workstation security compliant with FDA requirements.

P-CIM 7.70 is a powerful SCADA/HMI system dedicated to monitoring industrial control, fire, safety, security and building management systems. P-CIM offers a development environment for non-programmers, Web connectivity, networking, communications, data acquisition, alarm management, reporting and an intelligent operator interface. P-CIM offers a set of tools to securely manage and control real-time processes and quickly create eye-catching control displays.
